

CROSS-REFERENCE TO A RELATED APPLICATION

This application is a divisional application of serial no. 09/763,226 filed on April 25, 2001, *now U.S. Patent 6,689,404.*

BACKGROUND OF THE INVENTION

The invention concerns a food-processing industry and can be utilised in medicine and pharmacology, in particular for production of bread, confectionery and pasta, lactic foodstuffs, children's foods, fruit waters and other drinks such as kvass and beer; and also for manufacturing of vitaminized and mineral complexes used for regulation of iodine exchange and for prevention of iodine-deficit.

The problem of iodine deficit is a global problem. The population of many countries have lack of iodine, that leads to diseases of thyroid gland, disturbance of a metabolism which are capable to proceed in oncological disease. Other side of an iodine deficit is low growth and mental dormancy.

It is known to apply salt iodinated alimentary for compensation
